Standard Circuit

GLA-3743B

Low Noise Amplifier，37-43GHz

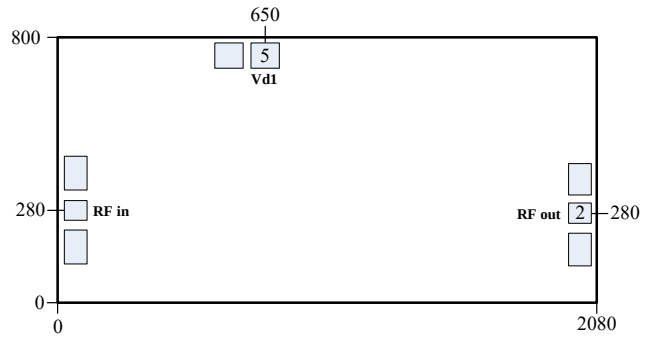
Performance characteristics

- ✧ Frequency range: 37GHz~43GHz
- ✧ Small signal gain: 22dB
- ✧ Noise figure:2.4dB
- ✧ P1dB: 15dBm
- ✧ DC Supply: Vd=5V@Id=61mA
- ✧ Dimensions: 2.08 mm×0.80 mm×0.07 mm

Product Description

GLA-3743 is an Q-band broadband low noise amplifier chip with a frequency range of 37GHz~43GHz, small signal gain of 22dB and a typical noise figure of 2.4dB.

Die Outline Dimensions



Notes: 1) All dimensional units are micrometers (μm).

2) Tolerance for die length and width: ±50 μm.

3) Die thickness: 70 μm

Electrical Specifications

(Vd=5V，Id=61mA，TA=+25℃)

Parameter	Min	Typ	Max	Unit
Frequency range	37		43	GHz
Small signal gain	22.0	22	22.6	dB
Gain flatness		±0.3		dB
Noise figure		2.4		dB
P1dB		15		dBm
Input VSWR		1.6	2	-
Output VSWR		1.6	2	-
Quiescent Current		61		mA

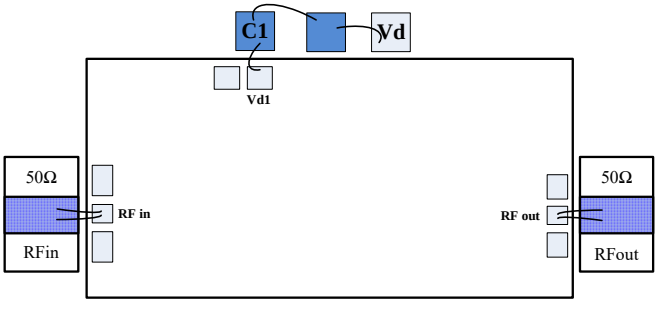
Bond Pad Definition

No.	Symbol	Function Description	Pad Size(μm^2)
1	RFin	RF input port, matched to 50Ω system. No series DC blocking capacitor required	80×80
2	RFout	RF output port, matched to 50Ω system. No series DC blocking capacitor required	80×80
3	Vd1	Drain bias supply pin; 100 pF, 1000 pF shunt bypass capacitors are required externally.	120×120

Absolute Maximum Ratings

Maximum Drain Voltage	8V
Maximum Input RF Power	15dBm
Storage Temperature	-65℃~150℃
Operating Temperature	-55℃~85℃

Recommended Assembly Schematic



Note: The peripheral capacitor C1 is 100 pF and C2 is 10000 pF. It is recommended to use a single-layer capacitor for C1 and place it as close as possible to the chip bonding pads.

Low Noise Amplifier，37-43GHz

Handling & Operating Precautions

1) Storage: Dies must be stored in ESD-protected containers under nitrogen atmosphe

2) Cleaning: All die handling shall be performed in a cleanroom environment. Liquid cleaning solvents are prohibited for die cleaning. die handling shall be performed in a cleanroom environment. Liquid cleaning solvents are prohibited for die cleaning.

3) ESD Protection: Strictly follow all ESD control protocols to prevent electrostatic damage to the die.

4) General Handling: Handle dies only with vacuum pick-up tools or precision fine-tip tweezers. Avoid contact between tools/fingers and the die surface.

5) Power-up & Power-down Sequence: Power-up: Apply gate voltage first, then drain voltage.Power-down: Remove drain voltage first, then gate voltage.

6) Die Mounting: Two acceptable processes are AuSn eutectic sintering or conductive epoxy bonding. The mounting substrate surface must be clean and flat; minimize the gap between the die and RF input/output substrate traces.

- Sintering Process: Use 80/20 AuSn solder. Sinter temperature shall not exceed 300℃, total sinter time ≤20 seconds, scrub time ≤3 seconds.
- Epoxy Bonding: Apply minimal conductive epoxy dosage; follow curing specifications provided by epoxy supplier.

7) Wire Bonding Requirements:

- Unless otherwise specified, use two 25μm diameter gold bonding wires for RF input and output, with shortest possible wire length.
- Thermosonic bonding temperature: 150℃； use minimum feasible ultrasonic power.

8) Contact your supplier for technical support if any issues occur.
